

# Want to use PPS in more than one location?

## The Perfect Solution!

If you have more than one clinic, or if you want to use PPS away from your clinic on your laptop, then we have the perfect solution! It's called "PPS Sync".

With PPS Sync you can book appointments for any clinic from anywhere, update your clinical notes from home, centralise your monthly billing to just one of your clinics, the possibilities are endless!

## PPS Sync

PPS Sync uses a unique approach to allowing you to access your data from anywhere. Unlike other systems that allow you access to your data remotely, with PPS Sync you are not totally dependant on a permanent fast internet connection. This means that you can work anywhere anytime!

Likewise, you can also use PPS Sync in another clinic that does have a permanent internet connection. PPS will synchronise your two clinics together in real time.

## How does it work?

The PPS Sync Server process sends all its updates to and receives all its updates from a central fast secure database on the internet. This database is hosted and maintained by us. The Sync process on your PC connects to the central database automatically, so you do not need to configure in any way. If your PC becomes disconnected from the internet, PPS server will go into "idle" mode and will retry the internet connection every ten minutes (this interval can be changed) until the connection becomes available again.

If you are away from an internet connection all day, you can also close the server process and start it again yourself later as required.

When you are connected to the internet and PPS sync server is running, you are constantly sending and receiving your updates between systems. You can select the frequency that this happens so in a busy clinic it may be more important for this to happen every few seconds, or you could choose for this to happen every few minutes or even hours.

## What do I need?

In order to synchronise two or more PPS systems together, you simply need a valid PPS licence for each system and an up-to-date software support and maintenance contract. There is a small charge for setting up the PPS Sync process.

## What do I do next?

We will guide you through the whole process. From purchasing an extra PPS licence through to getting up and running with PPS Sync can take just a few minutes.

Give us a call – you could be moments away from setting up your PPS Sync system!
